

MANUAL ARTS REPORT

Name:	Charlie Oliver	D.O.B.	4/1/72
School:	Clamatea Christian School	Cust Code:	07A701

☐ OPEN ☒ U/16
 (Please ✓ the appropriate box)

☐ Wood Turning	☐ Metal Sculpture	☐ Clay-Handbuilt
☒ Wood Construction	☐ Metal Fabrication	☐ Clay-Wheel Thrown
☐ Wood Carving	☐ Sheet Metal Work	☐ Scrapbooking
☐ Marquetry	☐ Flax Construction	☐ Bilum Making

Use this form for all Manual Arts entries EXCEPT for any Needlework

Purpose or use of item: To store music and art items.

Describe your source(s) of ideas (eg. photo, library book/video):

List the materials and tools used in completing your project:

Measuring tape, pencil, ruler, square ruler, nails, glue, wood, hand saw, drop saw, skill saw, table saw, hand drill, drill bit, screws, safety goggles, ear phones, covered shoes, Stanley knife, rasp, file, rope

Describe the step-by-step procedures used to complete your project:

Step 1. First I put on the safety gear.

Step 2. I measured and drew the dimensions of the panels onto the plywood by using the measuring tape, square, and pencil.

Step 3. Then I cut out the two end pieces with the table saw using small wooden blocks to push the panel along, so my fingers wouldn't get too close to the saw.

Date:

Step 4. Next I cut out the front, back, lid and bottom using the same method on the table saw.

Step 5. I then placed the bottom piece down on a table and applied glue to one side.

Step 6. Next I applied glue to an end piece and joined them.

Step 7. I then drilled a few holes into the bottom of the end piece for the screws to go in.

Step 8. I used the drill to put the screws in the holes.

Step 9. I applied glue to the back panel.

Step 10. Next I applied glue to the end and bottom panels where they would be in contact with the back panel.

Step 11. I put the back piece onto the other two pieces and held in place while I drilled holes for the screws.

Step 12. I then drilled the screws in.

Step 13. For the front panel I repeated the same process as attaching the back panel.

Step 14. For the other end panel I applied glue to the necessary places.

Step 15. Next I put the end panel on the box and held it in the right position to drill the holes.

Step 16. I drilled the screws into the holes.

Step 17. I went around the joins of the box with a wet cloth to wipe off excess glue.

Step 18. I then measured how deep to make the depression for the hinges.

Step 19. Next I cut out the depression using the Stanley knife to cut small vertical slits close to each other.

Step 20. I then used the Stanley knife and cut the slits horizontally to create a rectangle depression.

Step 36. I attached the chain to the screws.

Step 37. I made the handle blocks by first cutting one block to size with the drop saw.

Step 38. Then I used the drill press to bore two holes into it.

Step 39. I then used the drop saw to cut it in half, thus getting two handle blocks.

Step 40. I drilled some holes into the ends for where the screws would go into the handle.

Step 41. Next I glued the handles on, holding it place for the screws.

Step 42. I then drilled the screws in with the drill.

Step 43. Next I cut two pieces of rope for the handles with a Stanley knife.

Step 44. I then put glue in the holes for the rope.

Step 45. I inserted the piece of into the handle block.

Step 46. From the inside I drilled screws into the rope to keep it in place.

Step 47. I then repeated this for the other handle.

Step 48. I sand the edges of the handle blocks and the panels.

Step 49. I varnished the outside of the box with a brush.
