Name:	George Samui		
Name:			
School:	Sechs	Cust. Code:	

State your purpose, hypothesis, or reason for your project:

"To show how an excavator operates"

Record the process or steps used in solving or approving the problem (hypothesis) or include an illustration of how your project works:

- Step 1. Cut out the measurements of the needed cardboard.
- Step 2. Use the glue-gun to assemble the pieces together firmly.
- Step 3. While connecting the cardboard pieces, use the toothpicks as the joints to make the arms moveable.
- Step 4. After the frame is complete, make a system for the movement of the arms and claw. (For mine I used syringes with vital tubes to make the air pressure move the arms)
- Step 5. After assembling everything together, test and refine your model before submitting it.

What has been proved or illustrated, or what is the conclusion drawn from your project:

My project proves that natural forces, no matter how much we disregard its importance, is a vital tool in engineering.
